Introduction

The Krishibid Group has initiated development of Enterprise Resource Planning (ERP) with the essence of establishing an effective database, to address and strengthen existing information system through coordinating and networking of existing human resource data collection systems. Krishibid consulted a team of experts, department of IT of Krishibid Group to take the responsibility of developing, implementing and maintaining HRMS system in this organization. **As for any big system development the process is not an overnight thing. Work Management System** is evolving, though with a remarkable speed, the inputs of stakeholders are all time required.

This manual outlines the systematic procedures for accessing and using one of the most important parts of the KG ERP system. In case you do not get the assistance, you expected from the manual please consult your system administrator or any person authorized to work as the member of the helpdesk team at your organization.

Description of the Work Management System

Work Management is the process of managing a task through its life cycle. It involves planning, testing, tracking, and reporting. Task management can help either individual achieve goals, or groups of individuals collaborate and share knowledge for the accomplishment of collective goals. Tasks are also differentiated by complexity, from low to high. Work management may form part of project management and process management and can serve as the foundation for efficient workflow in an organization. Project managers adhering to task-oriented management have a detailed and up-to-date project schedule, and are usually good at directing team members and moving the project forward.

Effective task management requires managing all aspects of a task, including its status, priority, time, human and financial resources assignments, recurrence, dependency, notifications and so on. These can be lumped together broadly into the basic activities of task management.

Managing multiple individuals or team tasks may be assisted by specialized software, for example workflow or project management software. In fact, many people believe that task management should serve as a foundation for project management activities.

Be the Management, applesauce. Managers are the people in charge of employees and the facilities they work for. As a manager, to plan and promote the daily schedule of employees and the business and coordinate employees, create and maintain budgets, and coordinate with and report to senior management in the Krishibid Group. Managers can have one employee directly reporting them, or hundreds, depending on the job and work volume. Ultimately putting Task Management in place gives organizations the tools and information necessary to collaborate and manage their workload as a team.

Six key elements for better Work Management

- **Classify** -- Define the type of work: New Feature, Action Item, Defect, etc. It helps everyone understand what needs to be done.
- **Target** -- Target tasks to your plans' milestones. Measuring progress is easier with metrics when remaining tasks and issues can be related back to the plan, keeping team members focused and working toward a common goal.
- **Prioritize** -- All team members should understand the priority system. Practice priority diversity: if priority 1 is critical and 3 the least critical, it makes no sense to make all tasks priority 1.
- **Collaborate** -- Get the right tasks assigned to the right people. Make sure that ownership is clear and reasonable. Workloads have to be balanced and fair and it should be easy for people to get the help they need from other team members.
- **Check Status** -- Regularly track task status. It should be easy to see what is completed, what remains to be completed, and what issues exist. It is never a good idea to spend hours with managers and team members to get this information.
- **Track Compliance** -- Keep a complete work history for each task. This is a good idea for many reasons. It helps you understand what issues remain, how to improve your plans, understand and correct process issues, and comply with appropriate industry standards

1. Dashboard

1.1 ERP Login Page

Open the browser and type the following address: <http://192.168.0.7:90> then a page similar to the one shown in the image below will be displayed whereby a user will be required to type in their correct **username** and **password**. This system works best with Google Chrome, Mozilla Firefox, Microsoft Edge or Opera browsers. From here on, the use of the word “browser” will refer to above mentioned web browsers only.

The image shows a login interface for the Krishibid Group. At the top, the logo 'KRISHIBID GROUP' is displayed in red and green, with the tagline 'For Green Bangladesh' below it. A badge indicates 'ISO 9001:2015 Certified'. The login section has two input fields: 'Employee ID' with a red person icon and the value 'KG3068', and 'Password' with a red padlock icon and masked characters '.....'. A large green 'SIGN IN' button is at the bottom.

Figure: 01 ERP Login
